Effective Revision Techniques

Retrieval practice is a learning strategy where we focus on getting information out. Through the act of retrieval or calling information to mind, our memory for that information is strengthened and forgetting is less likely to occur. Retrieval practice is a powerful tool for improving memory.

Spaced practice – This is when we do little amounts regularly (i.e., one hour a day for six days) as opposed to a lot all at once (i.e., six hours in one day). Spaced practice tends to be more effective for long term memory.

Interleaving – This is the mixing up of topics within a subject. Doing so helps us to make connections between topics and think harder.

On the flash card on the page in your workbook write a question on the 'front' and the answer on the 'back' - anything you definitely know the answer to.

You need to think about a key central idea (the middle of the mind map or graphic organiser) and then link other content to it. You should write as much as you can from your own knowledge first, recalling as much as possible.

After completing a mind-map, it's helpful to then refer to notes and textbooks to see if there is anything more to add or any misconceptions which may have been written down. At this point, to highlight any missing information can be useful when you have another go at the same mind map, to compare it next time to check if the missing knowledge has stuck next time.

There is little point in re-reading the maps after you have made them as this is a very passive way of trying to revise. After making a mind map, it's a good idea to do some practice questions which relate to the concept you have been mapping. Get a parent or friend to quiz you on material. Or try to recreate it multiple times from memory – when checking, add in anything you'd missed in a different colour or highlight this part so you know to focus on it next time. (retrieval)

How to Self-quiz

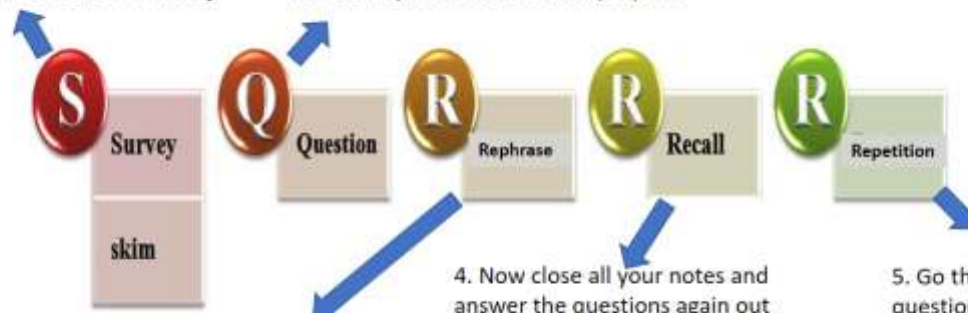

Self-quizzing is a powerful strategy to get knowledge stuck in your long-term memory.

- Look** → Read a small section of your knowledge organiser, e.g. keywords and definitions, labelled diagram
- Cover** → Cover up the definitions or diagram
- Write** → Now, from memory, write them down in your self-quizzing jotter using a blue or black pen
- Correct** → Check your work and make any corrections or additions in a different colour of pen – always use the same colour for corrections (green for example)
- Repeat** → Have another go! Perhaps do this same section in a few days' time (spaced practice)

SQ3R – how it works!

1. Quickly re-read the information you are trying to revise from your workbook or revision guide. Note headings, sub-headings and other outstanding features, such as figures, tables, and summary paragraphs.

2. Look at practice exam questions, review questions at the end of the chapter, quizzes you made for this information the previous year or Do Now activities for this content area. Knowing these questions will allow you to read on with purpose.

3. Read back over the initial material you want to learn but this time you are looking for answers to the questions – when you find the answers you must rephrase it as if you are teaching it to someone. You can write these down or say them out loud.

4. Now close all your notes and answer the questions again out loud without peeking at your notes. This will force your memory to work harder – remember learning takes effort. If you just re-read your notes / answers then it's too passive and it won't stick in your long-term memory.

5. Go through the questions you had in Q and try to recall the answer to the questions. Space out this practice by repeating it a four days later, then a week later and keep recalling it until it completely sticks!
